# The User Story

Presentation By:

TRADER JOES

01. Applicant

02. Recruiter

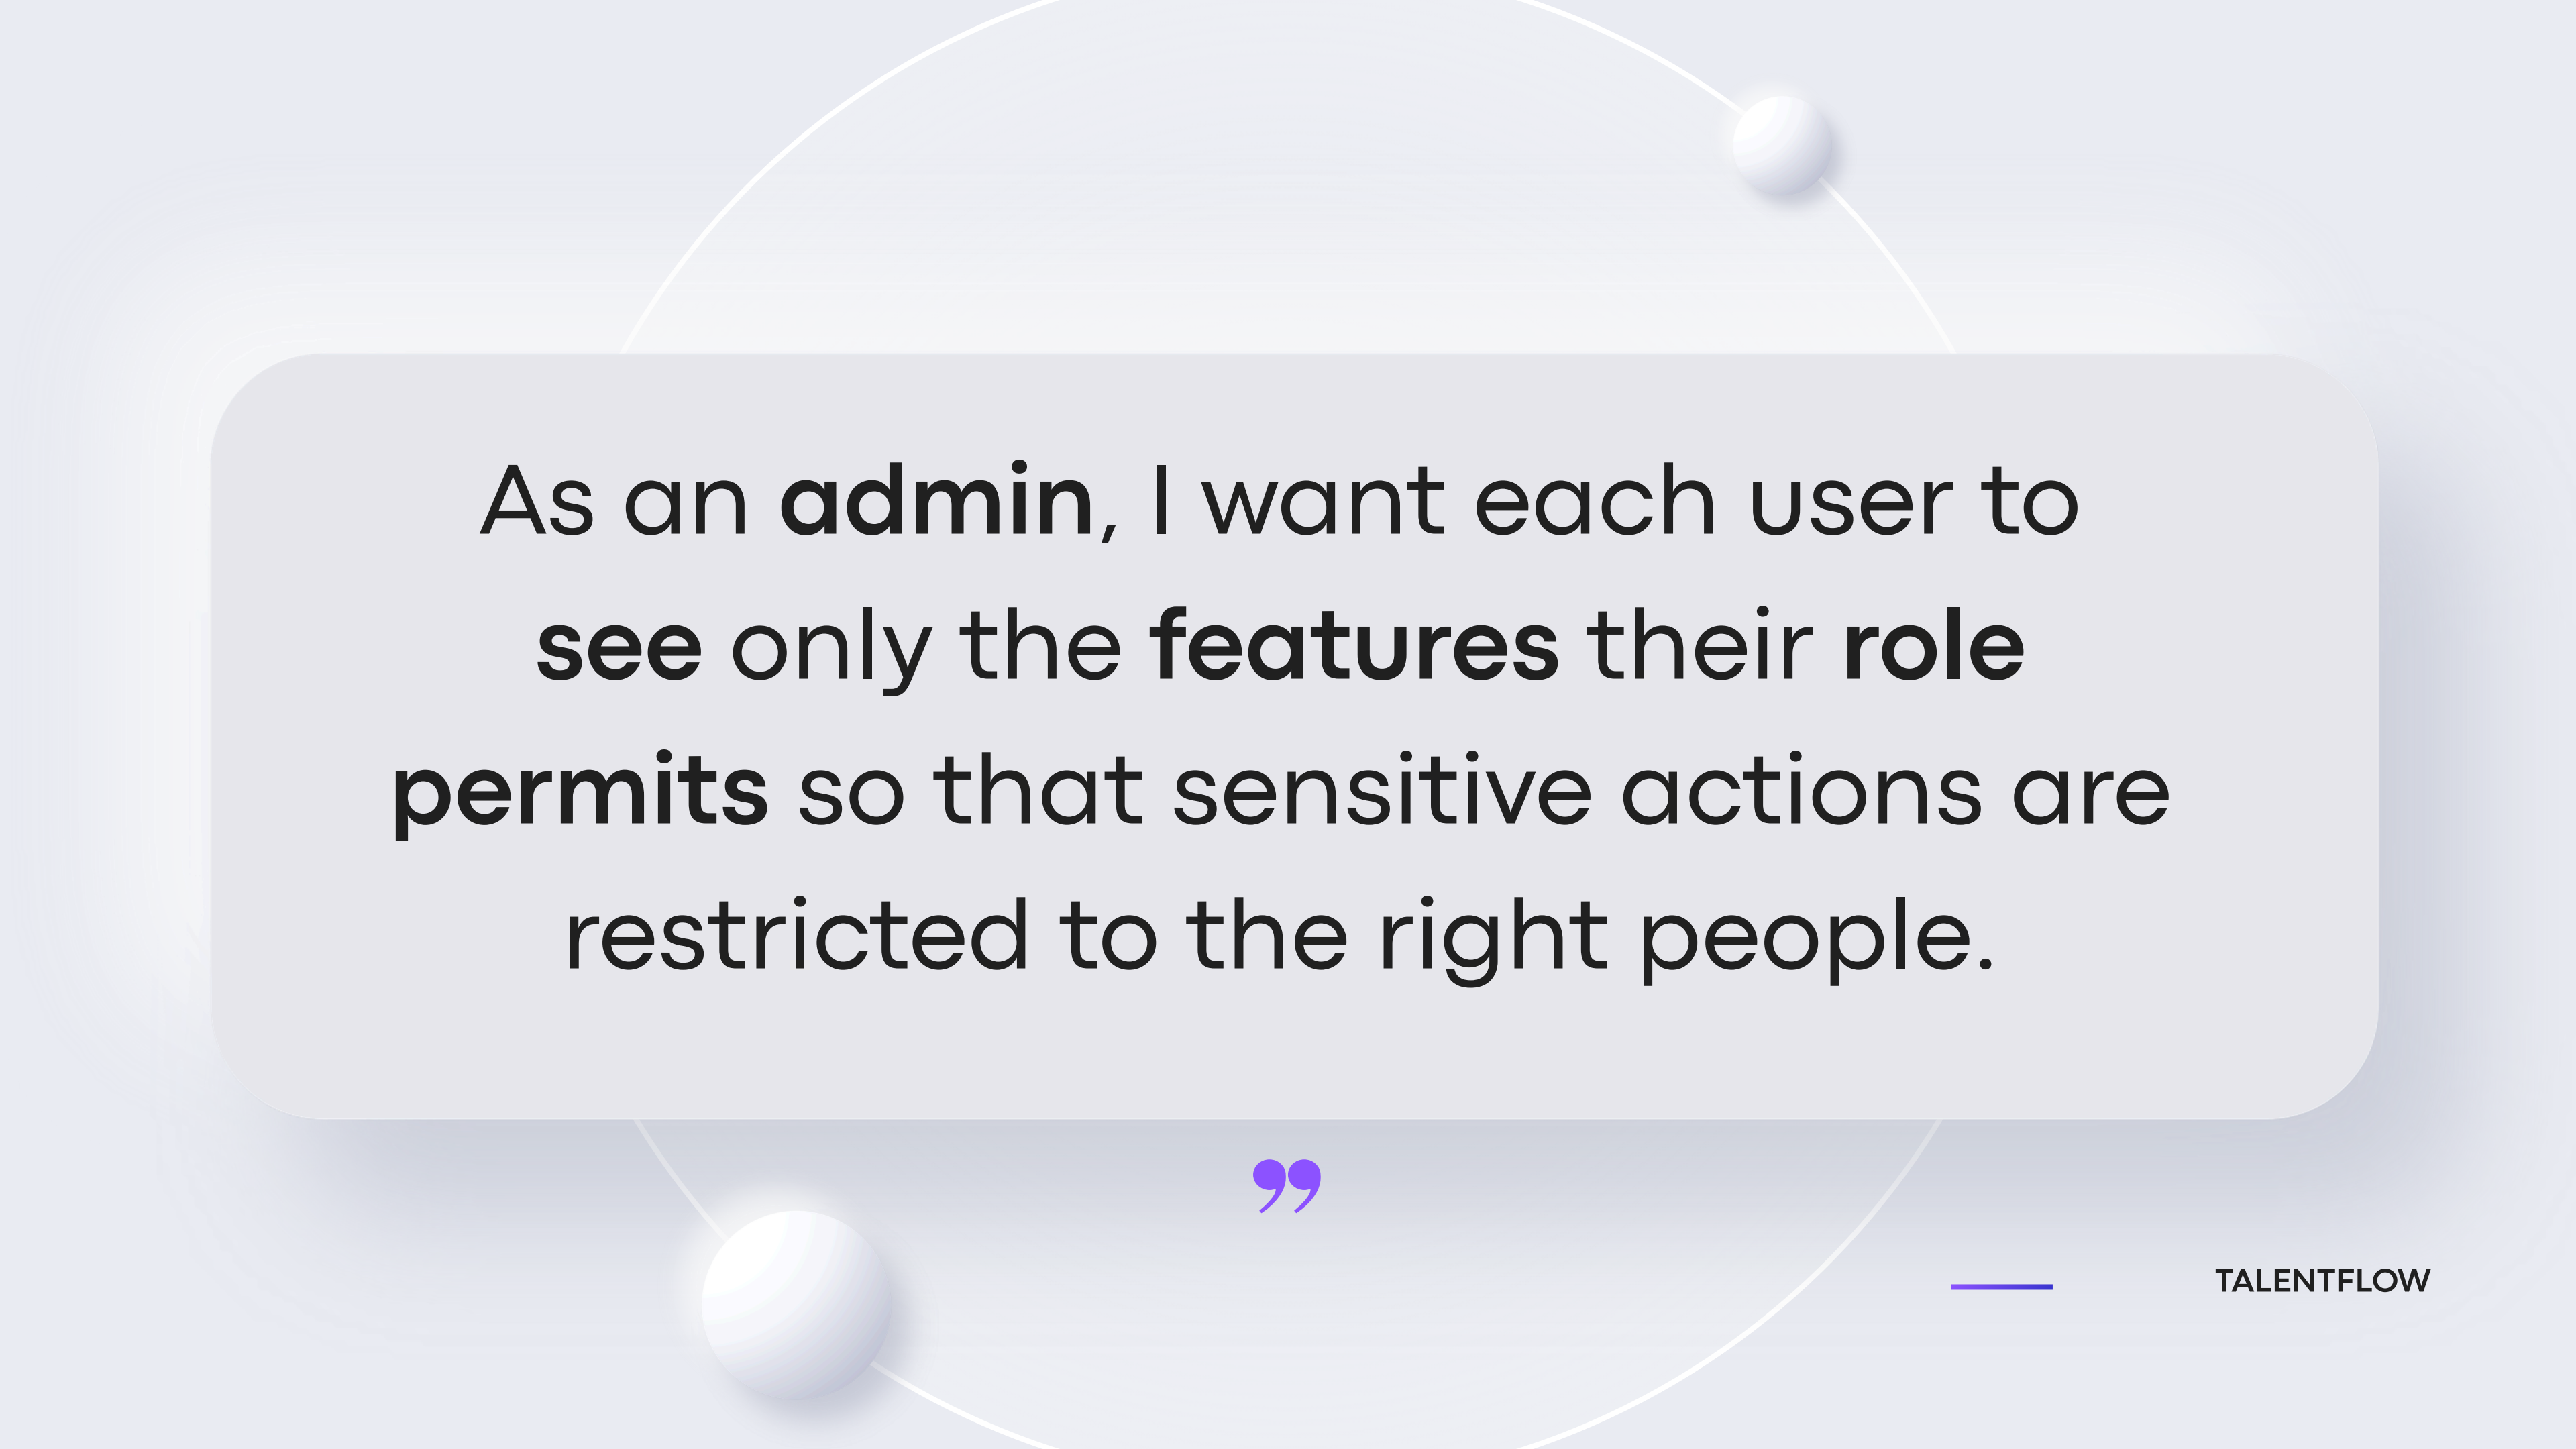

03. Hiring Team

04. Admin

# Roles

As a recruiter, I want to log in  
and log out securely so that  
only authorized staff can  
access applicant data

”

As an admin, I want each user to  
**see only the features their role  
permits** so that sensitive actions are  
restricted to the right people.

”

As a recruiter, I want to create a job posting with its role requirements so that applicants can apply and the AI has criteria to score resumes against.

”

As a recruiter, I want to edit and close my job postings so that I can refine requirements and stop intake once a role is filled.

”

As an applicant, I want to **browse the list of open positions** so that I can find a role that matches my background.

”

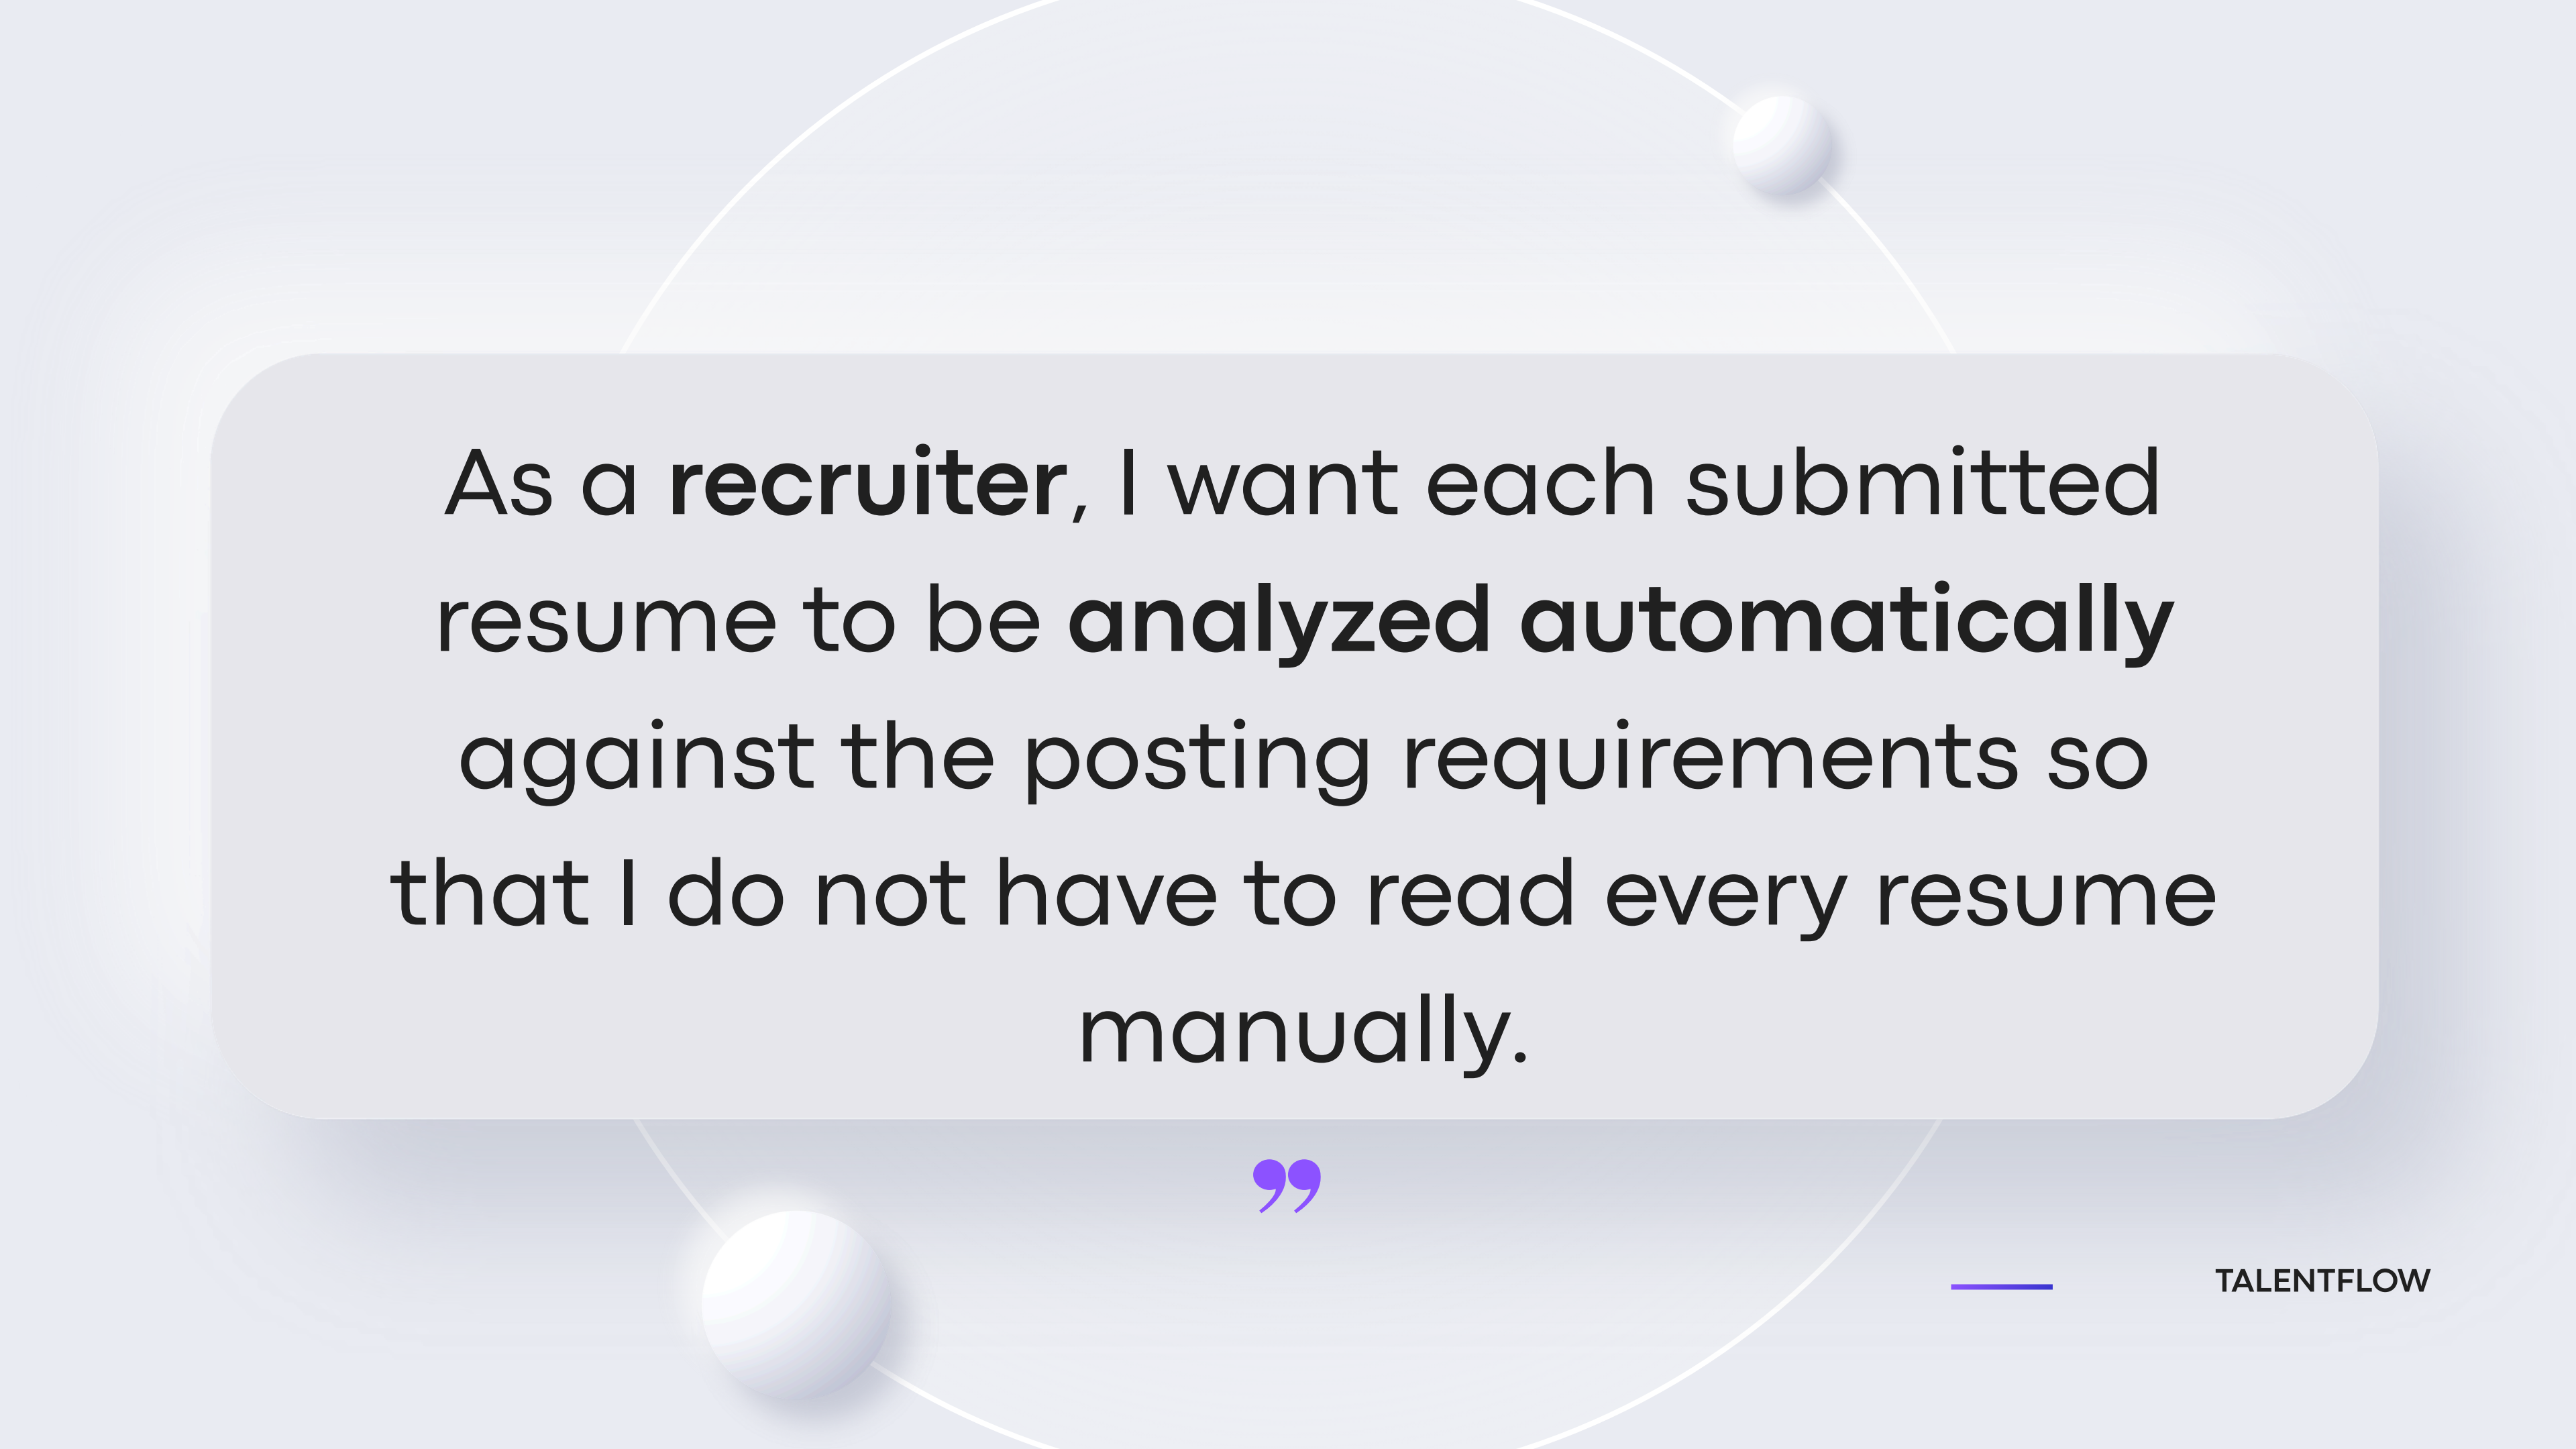

**As an applicant, I want to submit my details and upload my resume online so that I can apply without having to email anyone.**

”

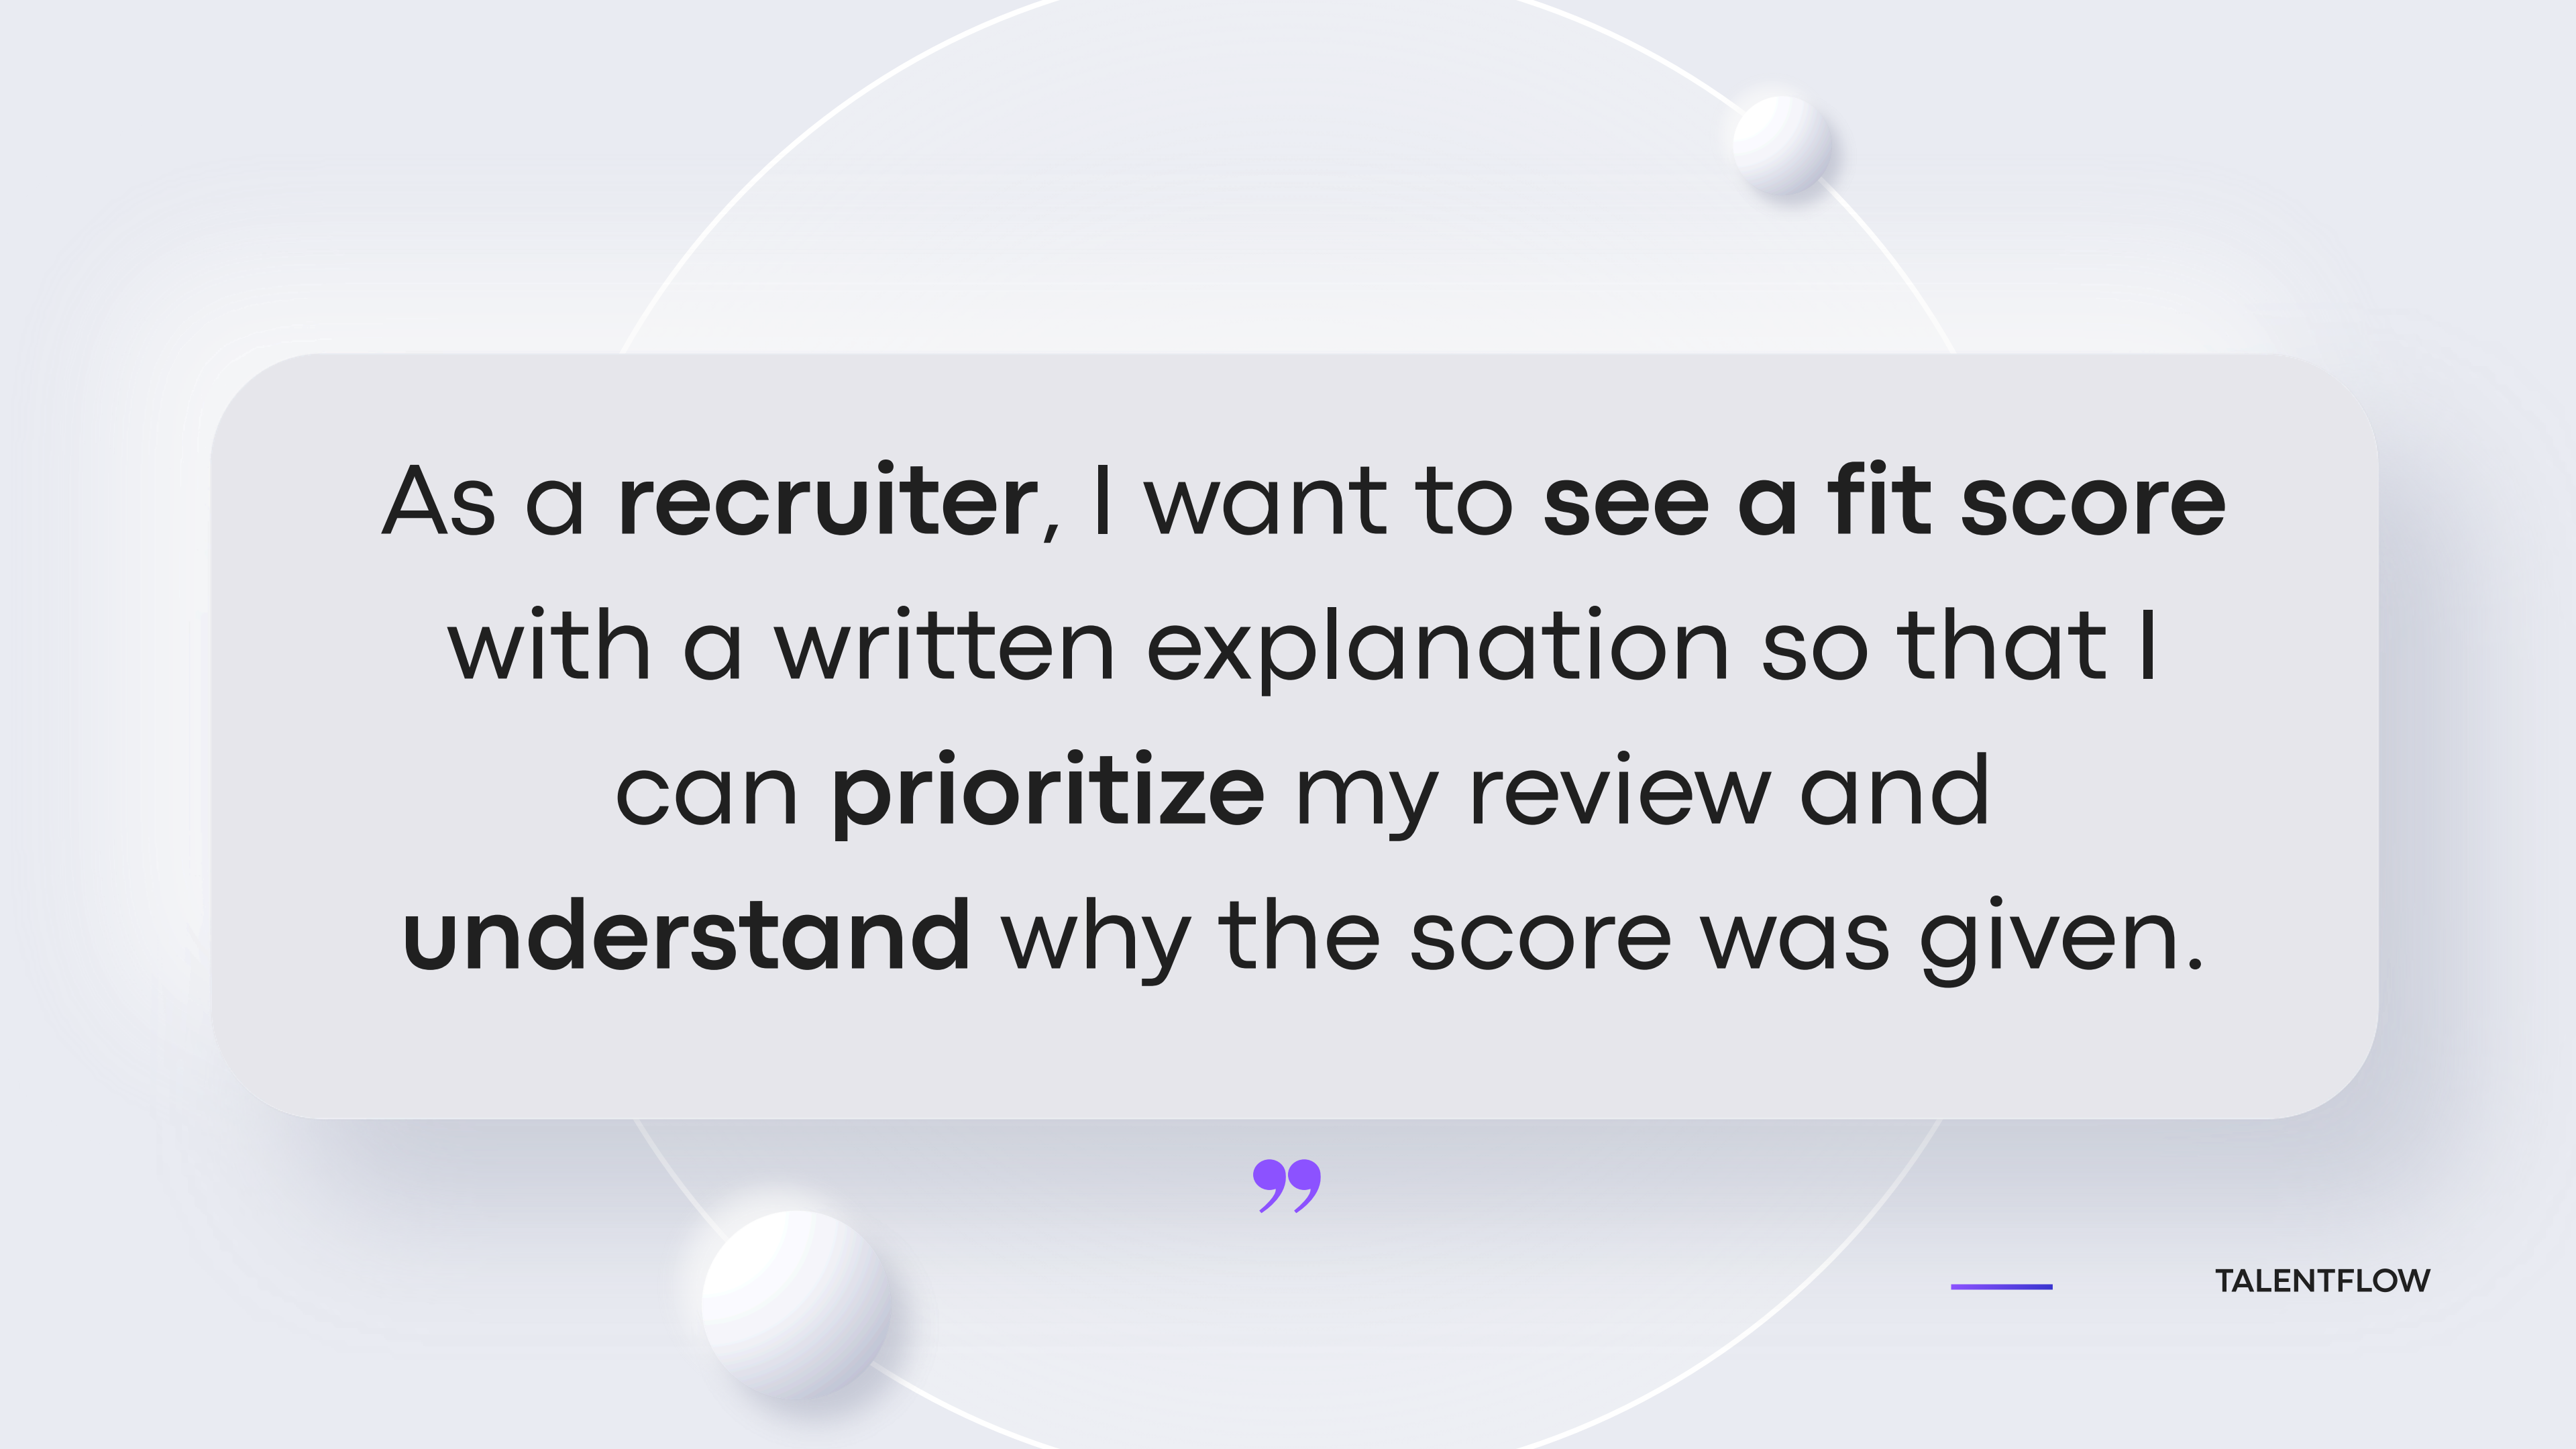

**As a recruiter, I want to view all applicants for a posting and open their full profiles so that I can evaluate candidates in one place.**

”

As a **recruiter**, I want each submitted resume to be **analyzed automatically** against the posting requirements so that I do not have to read every resume manually.

”

As a recruiter, I want to see a fit score  
with a written explanation so that I  
can prioritize my review and  
understand why the score was given.

”

As a recruiter, I want to see all applicants for a posting on a Kanban board so that I can understand the state of the hiring process at a glance.

”

As a **recruiter**, I want to **move** an applicant into a **different stage** so that the whole team can see the candidate's current status.

”

**As a recruiter, I want to search, filter,  
and sort applicants so that I can  
focus on the candidates most worth  
my time.**

”

As a recruiter, I want to assign hiring team members to my job posting so that they can view applicants and provide feedback for that specific role.

”

As a hiring team member, I want to  
add notes and a rating to an  
applicant so that the team's feedback  
lives in one shared place instead of  
scattered chat threads.

”

As a recruiter, I want to compare shortlisted applicants side by side so that I can choose between candidates with similar profiles.

”

As a **recruiter**, I want a dashboard summarising my postings and applicants so that I can track progress without opening each posting individually.

”

As an admin, I want to **create accounts, assign roles, and deactivate** users so that each person has exactly the access their job requires.

”
